

Items to be centric in the page

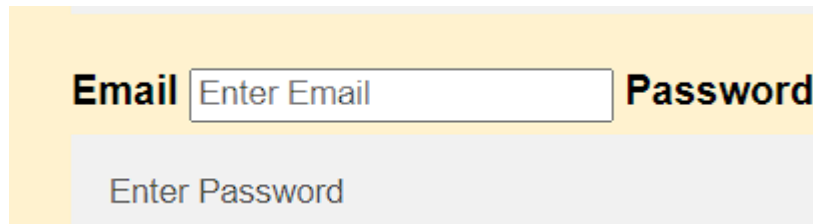

I tried to make the items in .content centric which

- I also used justify content : center however that pushed everything in the exact middle of the page and not stating from the top so
- I removed justify content and added padding 80px which will push everything to the top

Sign up button not showing

- I had to add display-box to fix this issue

Validation lead the input field to become smaller

The route of the app wasn't working after login in when I tried to enter booking as the logging page

Showed invalid syntax error

jinja2.exceptions.TemplateSyntaxError

jinja2.exceptions.TemplateSyntaxError: unexpected '}'

It was because of a missing } in

```
<h1> Welcome Back  {{log_main}} </h1>
```
